BEAUTIFUL WOMEN by MARCEL WANDERS signals the return of a type of furniture that has all but disappeared.

The dressing table consists of a mirror with a richly decorated frame and a glass shelf, a small dresser, in two variations, and a storage stool.

The sober dresser features a sunken top and cast brass handles in the shape of an apple and a snake, a reference to the first woman.

The more baroque cabinet features a spherical, massive wooden foot on which a top has been fitted.

The stool, with its graphic design and round forms, refers to the 1960s.

The series is a post-modern ensemble intended as a tribute to womankind.

**Quote by the designer about Beautiful Women:**

"Luxury is to live an exciting passionate life in comfort and commitment, to feel you are special and make a difference while achieving personal growth, to contribute to the greater good and feel you share love".

"Luxury starts where functionality ends and where the true value is personal and so has no price or reason".

Marcel Wanders, Designer

**Jen**

### *Dimensions, features*

Length: 70 cm, wide: 40 cm, height: 59 cm

Jen features 2 open storage partitions (vertical separation panel of 70 cm)

### *Materials*

The base is made of solid ash wood and the top of MDF with ash wood veneer, which is stained in colour.

When stained in red or black, the visible wood structure looks exactly the same as solid oak. Ash wood is extremely durable and the humidity percentage of the purchased solid wood is excellent for high quality manufacturing.

### *Colors*

1. Stained in satin black.
2. Stained in satin red.

### *Delivery, transportation*

We deliver Jen in 2 well developed carton boxes (top + foot). The carton has the highest possible export quality. For some export destinations, we deliver in a wooden crate.

### *Mounting*

The spherical foot can be screwed on the top.

### *Maintenance*

The cabinets are made of high quality solid wood and veneer. Solid wood has its own natural characteristics and may show knots, deformations and black spots.

Open defects are allowed in non-visible areas to the extent that the normal product strength are not influenced.

Solid wood 'works', which means that over time natural little cracks may appear. A constant temperature and humidity of the air are important for a 'lifetime' preservation.

For the optimal preservation it is important to avoid any contact with sharp, hot or chemical liquids. Remove moist spots as soon as possible.

Keep the surfaces clean with a dry cotton cloth. If required use a moist cloth or a little bit of soapy water, clean in the direction of the wood structure and finish the cleaning with a dry cloth again. Never use any chemical cleaning liquids and / or abrasives.

Remove liquids preferably within 15 minutes.
